# Abstracting and Actualizing

A strategic mindset on how to approach learning and applying at large.

When

When? - The main focus parameter that timeframes the information taken in. When shall you abstract or actualize the incoming information?

Abstract

Why? - Identifies meaning and reason(s) behind Concept(s) used in any instance.
Where? and Who?/Whose? - History of the concept(s)'s proof of existence and origin.
You do your due diligence here.

Actualize

How? and What?/Which?/What Kind? - Identifies the factors attributed towards and chosen for a concept. It

allows you to "think outside the box".
Tip: Practice Middle-Out by Actualizing more before Abstracting.
